## TO FIT INSIDE WINDOW RECESS

1. Measure WIDTH 'A' between the two walls at the point where the fittings will be attached.
2. Measure HEIGHT 'B' between the wall above window and top of window sill.
3. Please let us know if your recess is tiled half way.

## TO FIT OUTSIDE WINDOW RECESS

1. To calculate WIDTH 'C'. Measure width 'A' and add a minimum of 3 inches (7.5cm) to allow for overlap each side of the recess.
2. To calculate HEIGHT 'D'. Measure height 'B' and add 5 inches (13cm) to allow for overlap at top and bottom of recess.

## SPECIAL NOTES

1. All blinds will be cut, printed and made up according to the measurements.
2. **Widths of blinds are not widths of fabric.** All our blinds require fixtures which extend slightly beyond the actual fabric width. Do **not** give us fabric widths on the order form. If still in doubt send rough sketch with all dimensions marked.
3. If a Sidewinder is required state left or right.
4. Please note that the fitting brackets despatched with our blinds are a 'universal' design. i.e. they enable you to attach the blind either to the window surround or to the ceiling of the window recess or to the inner wall of the recess.
5. Please let us know if you are going to fix your blinds on to UPVC windows or doors as we can supply you with the correct screws.

## DOOR BLINDS

To measure door blind please use the same measuring instructions as for fitting a blind outside the window recess – Measuring the width of the glass and adding 3 inches. Measure the height of the glass and add 5 inches. Remember to allow clearance for door handle.
